

# LOGO STENCIL INSTALLATION INSTRUCTIONS

## STEPS:

- 1 The installation of your logo, should be installed at the same time as the installation of the hockey line markings or when installing the curling lines and houses.
- 2 The ice surface must be completely frozen, level, and smooth before applying the logo stencil.
- 3 **NOTE:** Some stencils are manufactured and shipped in sections. If your stencil is in sections, lay the logo onto the ice surface and join the stencil pattern together using masking tape. Tape along the **complete** edge(s) to be fastened. Where the pounce perforations are covered with the masking tape, use a small finishing nail or equivalent to make the necessary perforations again.
- 4 Locate and lay the paper logo stencil onto the prepared ice surface. Anchor the stencil by freezing the four (4) corners to the ice surface using your fingers dipped into a small container of warm water. If the logo is large in size, anchor the stencil in several locations along the edges.
- 5 The stencil is now ready to pounce. Proceed using the (blue) pounce chalk and cotton rag supplied with each pattern. Place the pounce chalk onto the cotton rag so you can form a small sack to pounce the stencil. **TIP:** To assist you in pouncing any size pattern, attach the sack of chalk onto a hockey handle or broom handle, using tape, this prevents stepping onto the pattern throughout the pouncing procedure. **TIP:** Purchase a "Vileda Fibro Mop" from a hardware store i.e. Canadian Tire and place the pounce chalk in a small garbage bag. Place the mop into the bag and cover the mop head with the chalk. Shake the excess chalk off the head while in the bag and apply to the pounce pattern by rubbing chalk over all pounce perforations.
- 6 Using the pounce stick applicator or mop, apply the chalk to the outline of the logo allowing the chalk to penetrate the perforations. Pounce the complete outline carefully, and also rub the same outline thoroughly with the pounce stick or mop to ensure the chalk has penetrated the perforations.
- 7 Carefully lift up the pounce pattern stencil from the ice surface using a number of people and walk the whole pattern off of the ice rink without spilling any chalk onto the surface. The pattern is reusable and should be stored in the shipping /storage tube, after it has been cleaned off. **NOTE:** Do not walk onto the chalk imprint that has been produced on the ice surface when removing the pattern stencil.
- 8 Using a garden sprayer/ knap sack sprayer or equivalent, lightly mist over the chalk imprint several times to ensure that you can walk onto the imprint without disturbing it.
- 9 It is recommended that different sizes of quality natural hair paint brushes, (available in any Hardware store) be used for the painting of your logo. If the pattern is large in size, use paint rollers or a natural hair curling broom to expedite this procedure.
- 10 When completely painted, lightly mist the logo over many times to ensure the pattern will not be affected when building extra ice in completing your ice surface installation.
